The SQL Data Warehouse

The SQL Data Warehouse integrates seamlessly with the Fund's existing ISSI system to provide extensive reporting and data manipulation capabilities without custom programming charges. An easy-to-use and powerful tool, the SQL Data Warehouse offers immediate, flexible access to the Fund's data, helping meet the information demands from Participants, Employers, and service providers on an ad-hoc basis.

How It Works

Each night, the Fund's production data is copied from the ISSI system to the SQL server. The SQL Data Warehouse can also receive real-time updates from the core ISSI system. The Fund staff then uses this duplicate database to create queries, reports and extracts with Microsoft Access or SQL and incorporate the results into MS Word, Excel, PowerPoint, and other desktop applications. The SQL Data Warehouse allows users to:

- Design ad-hoc reports, queries, graphs, charts, and mail mergers
- Save and retrieve report settings
- Create lists, labels, and reports with custom formats
- Modify and customize standard ISSI reports

For more information on the SQL Data Warehouse, please contact Andrew Devine at (856) 910-9190 ext. 429 or ADevine@issisystems.com.
